CAREER OBJECTIVE: TO BECOME A BUSINESS PERSON

Dedicated and driven individual aspiring to leverage acquired management skills to embark on a fulfilling journey as a business person. Eager to apply strategic thinking, leadership prowess, and a keen understanding of market dynamics to drive growth, foster innovation, and maximize organizational success. Seeking opportunities to contribute to a dynamic business environment, where my passion for entrepreneurship and knack for effective management can flourish.

EDUCATION: MATERIALS AND METALLURGICAL ENGINEER

Degree	Year	Institution	Percentage/GPA
Bachelors of Science in Metallurgical & Materials Engineering	2024	University of Engineering & Technology, Lahore	3.2/4
Faculty of Science, Pre-Engineering	2020	Punjab Group of Colleges, Lahore	90.36%
Matriculation	2018	LDA Model Boys High Secondary School, Lahore	95.18%

PROFESSIONAL EXPERIENCE: (TRAININGS AND TECHNIQUES)

- **Internee, Pakistan Aeronautical Complex Kamra. (May 2022 – June 2022)**

The experience at Kamra, PAC is both enthusiastic and engaging in the way that we're getting amazed day-by-day by the discipline being followed in PAC, Kamra and undoubtedly, by the way, every single worker being working there with same zeal and zest for the national defense.

With the motto, Strengthening National Defense through Self Reliance!

- **Internee, MILLAT TRACTORS PVT LIMITED. (August 2022 – September 2022)**

I'm very pleased to announce that I've completed my Internship at Millat Tractors Limited, Alhamdulillah!

Being a student of Metallurgical & Materials Engineering, availing a chance to understand the Quality Assurance Techniques, on the industrial level, being followed there to maintain the quality of the product as per ASTM was a useful experience. The experience other than being the Metallurgy majoring Intern there was to get familiar with the Engine Assembling & its various parts, and its functioning.

- **Internee, PCSIR Laboratory. (June 2023 – July 2023)**

During my internship at PCSIR Laboratory in the Materials and Metallurgical Engineering department, I gained hands-on experience in material analysis and characterization techniques. I worked with advanced instruments like Scanning Electron Microscopes (SEM) and X-ray Diffraction (XRD) machines, enhancing my understanding of microstructural analysis. My tasks included conducting tensile strength tests and hardness measurements on various metal alloys. I collaborated with experienced scientists on research projects, improving my problem-solving and analytical skills. This internship provided valuable insights into real-world applications of metallurgical principles and significantly enriched my technical knowledge and practical expertise in the field.

PROJECT: (FYP)

Coke Oven Inspired Recycling of Organic Materials for the Production of useful Industrial Products.

Shifting from conventional carbon black production methods to recycling waste materials in Pakistan not only addresses environmental and societal issues associated with carbon oil but also aligns with sustainable development goals, providing an affordable and eco-friendly alternative.
