SUMMARY

An independent and self-motivated under-graduate looking for an entry-level position in the field of Electronic Engineering where I can utilize the extensive knowledge I am gaining during my 4 year course.

SKILLS

Team Leadership	Problem Solving	Good Communication
MS Office	PCB Design	Proteus
Sketch Up	AutoCAD	LabVIEW
Python	C++	MATLAB/Simulink

EDUCATION

2021 - present	BE (Electronics Engineering) at Dawood UET	(GPA: 3.82/4.0)
2019 - 2021	Class 12th(Govt. Degree Girls College, Gulistan-e-jauhar,Karachi	(A)
2018 - 2019	Class 10th (Civic School, Karachi)	(A)

WORK EXPERIENCE

- **Sui Southern Gas Company Ltd.** 4 SEP 2023 - 13 OCT 2023
Electronics Intern ; Services Dept. Telecom/ SCADA Section
 - Gained a comprehensive understanding of SCADA systems, communication protocols, and the integration of PLCs, RTUs, and HMIs in the automation, control, and monitoring of gas transportation processes
 - Acquired in-depth knowledge of radiowave technology and Yagi-Uda antennas used in SCADA communication systems
 - Gained Familiarity with various sensors employed in pipelines, monitoring critical parameters such as temperature, pressure, differential pressure, and flow rate.
- **Midas Safety (Prime Safety Ltd.)** AUG 2024 - SEP 2024
Electronics Project Intern ; Knitting Dept.
 - Designed a portable humidifier for glove knitting machines using Arduino, DHT12 sensor, atomizer, and LCD, providing precise humidity control to optimize machine performance.
 - Developed a machine downtime monitoring system with ESP32 to track operational issues and improve production efficiency.
 - Developed an automated error tracking and recording system that detects 6 machine errors and continuously monitors key parameters like humidity, temperature, and current for proactive maintenance.

CERTIFICATES

- Certificate of Participation in 2 Days Workshop on "Basic Robotics"
- Certificate of Completion "Introduction to Packet Tracer"

PROJECTS

- **Radar System using LabVIEW**

Control Engineering

Led a team in designing and implementing a radar system using ultrasonic sensors and LabVIEW to detect objects and measure distances accurately. Integrated an alarm system for safety, triggering alerts when objects enter predefined zones. Designed a user-friendly LabVIEW interface for real-time data visualization and analysis

- **Home Automation System using Transmitter - Receiver**

Digital Logic Design

Collaborated with team members to design and implement a home automation system using transmitter and receiver modules to control various home appliances. Designed the architecture of the home automation system, selecting appropriate transmitter and receiver modules and IC's based on range, frequency and compatibility requirements.

- **RC Soccer Bot**

Microprocessor and Micro-Controller

Designed the mechanical structure of soccer bot, selected and integrated appropriate motors, sensors and electronic components to enable remote control and autonomous functionality. Developed the software for the RC Soccer bot, including the control algorithm, motor control logic and communication protocol for remote operation
