PERMANENT ADDRESS

Vill:- TILAIYA
PS:- GIDHAUR
PO:-DUWARI
DIST :-CHATRA
STATE:- JHARKHAND
ZIP CODE:-825408

➤ **CAREER OBJECTIVE**

- To leverage my BGAS Grade 2 certification and five years of pipeline experience as a Quality Engineer, currently excelling in structural steel fabrication in Saudi Arabia's oil, gas, and construction sectors. Skilled in welding and coating inspections, ensuring compliance with AWS D1.1, API 1104, ASME SEC II & IX, 12-SAMSS-007, SAES-H-001, SAES-H-101V, and ISO 12944 standards. Aim to deliver high-quality projects through proficient NDT, defect resolution, and detailed reporting while upholding HSE standards and collaborating with project teams.

➤ **Experience Summary:**

- **Dolphin International Steel Co. Ltd**, Jubail, Saudi Arabia
Working as a Painting Inspector from June 2023 to till date.
- **RINA INDIA PVT. LTD.**
Worked as a Third Party Inspector (Welding & Coating) in Pipeline from June 2022 to May 2023.
- **AUTOMECH ENGINEERING & CONSULTANCY**
Worked as a Quality Inspector (Welding & Coating) in Pipeline from July 2020 to May 2022.
- **JRD ENGINEERING PVT. LTD.**
Worked as a Quality Inspector (Welding & Coating) in Pipeline from July 2018 to June 2020.

➤ **Professional Qualifications:**

- **B.Gas Gr. 2 – Coating Inspector**
- **NDT Level 2**

➤ **Responsibilities**

- Ensuring the products meet the specified requirements and attain the required level of quality, completion of the relevant Quality controls inspection Reports.
- Verify & Checking (G.I.2.100) Work Permit Systems prior to start of blasting & Coating activities.
- Review & Checking Applicator Certificate, Verification of blasting/Painting equipment condition, calibration certificate of instruments.
- Monitoring of size, shape dryness and cleanliness of the blasting material.
- Monitor Weather Conditions, Air Temperature, Dew Point, Relative Humidity & Surface temperature prior to abrasive blasting & painting activities.
- Checking the contamination of the substrate (Oil/Grease) immediately prior to blasting.
- Checking & Inspection of Surface Profile (Degree of Roughness), Degree of cleanliness, Mechanical Faults (Lamination & Weld Joints) & Residual Chloride Contamination prior to application of paints.
- Material receiving inspection at painting ware house to ensure that painting materials are supplied as per specifications and stored in dry and well-ventilated rooms as per the manufacturer instructions.
- Random inspection of manufacturer's label, batch numbers, order numbers, date of manufacture & shade etc.
- Surface preparation prior to painting, monitor the surface preparation works prior to prime coat to ensure that the surface shall be free from contamination like welding slag, welding spatter, dust, oil, greese, slats and make sure that blasted surface profile achieved accordance to project specification, check the degree of cleanliness, surface profile etc.
- Monitor the abrasives such as steel shots, steel grit, copper slag, garnet are as per the projects specification and also verify the expendable abrasives are not reused, recyclable abrasives being recycle in proper procedure.
- Inspection and monitor the weather conditions and verify the humidity, dew point temperature, surface temperature etc.
- Maintain record Inspection report- RFI for surface profile (replica tape) and ambient conditions, relative humidity and the type of abrasive.
- Inspection of primer coating after surface preparation check, witness WFT (Wet film thickness) record DFT (Dry film thickness) documentation.
- Verification and approval of contract of quality control procedure and inspection.
- Monitoring and inspection surface preparation blasting and painting to ensure and check abrasive, surface profile, coating environmental condition and perform test such as holiday test, adhesion test (after the coating process will quantify the strength of the bond between substrate and coating).
- Maintain daily activities and reported.

- Review painting procedure witness of mixing paint and paint application.
- Giving recommendation about repaired if find painting defects.
- Review and verify with client all works completed successfully and ensure that report/records as per client specification and fabrication.
- Monitoring plan and allocation manpower during executing of projects.
- Reviews and comments on the contractors work procedures and methodology laboratory and field testing required for the execution of the jobs.
- Monitoring of Painting sub-contractors activities to achieve the Project Quality requirement.
- Recommend the selection and application of coating painting and insulation systems based on the criticality of environment and operating conditions.
- Wet film thickness shall be measured to eliminate major rectification to meet required DFT on random basis with Comb Gauge or eccentric wheel immediately after paint application.
- Dry film thickness shall be measured after the adequate hardening or curing of the coating the thickness of each individual layer should be measured. The colour of the top coat shall be checked by comparison with colour chart like mussel or RAL colour chart.
- Investigate and critically analysis any instances of premature failure painting, coating and insulation failures and recommends the corrective action.
- Conduct the site inspection at all stages and prepare the non compartments and corrective action reports.
- Discusses with the paint manufacturer for failure analysis, paint and coating evaluation. Reviews the analysis outcomes and follows up.
- Inspecting and auditing of shop applied and field joints coating (Liquid airless spray painting) of Petrochemical plant pipelines, Spools, Supports and Structural as per specification and standards (such as NACE, ASTM, ASME).
- Implementation of the recommendations.
- Conduct the site inspection at all stages and prepare the non conformance and collective action reports.
- Checking of coating colour appearance uniformity and Stenciling of identification on equipment piping our structure.
- Checking coating adhesion and coating thickness of cured FBE.

- Monitoring of High voltage pinhole/holiday testing of the coated surface area of pipe.
- Monitoring implementation of contract quality plan.
- Calibration of test equipment and verify the Calibration record.
- Check the repair and touch of marking defect.
- Check surface preparation and wrapping application for all underground pipelines.
- QA/QC documentation and make final inspection test and final package.

➤ **PROJECTS HANDLED**

- **CLIENT : SINSINA**
PROJECT : MODULAR SKID PACKAGE (6005)
Fabrication of Skids and Supports
- **ODS Saudi Company**
PROJECT : SWCC YANBU PHASE-3 PROJECT (SKIDS)
Fabrication of Structural Steel.
- **ARABIAN RIG MANUFACTURING COMPANY**
PROJECT : MUD SYSTEM (TANK)
Fabrication of Mud Tanks.
- **CLIENT : GREEN LINE CONTRACTING CO.LTD**
PROJECT : JAZAN PROJECT
Fabrication of Miscellaneous Structures.
- **CLIENT : HYUNDAI E&C**
PROJECT : TANAJIB UTILITIES UNIT
Fabrication of Miscellaneous Structures.
- **CLIENT : JGC ARABIA CO. LTD.**
PROJECT : ZULUF PROJECT (Circular Platforms)
Fabrication of Miscellaneous Structures.
- **CLIENT : CHINA RAILWAY CONSTRUCTION CORPORATION LTD.SAUDI BRANCH**
PROJECT : UPGRADING BUILDINGS FOR RISK MITIGATION PROJECT(PACKAGE 3)
Fabrication of Structural Steel.

- o **ODS Saudi Company**
PROJECT : MARJAN INCREMENT PROGRAM-TANAJIB PKG 9 & 1
Fabrication of Structural Steel.
- o **CLIENT : INMA STEEL FABRICATORS COMPANY LTD.**
PROJECT : JAFURAH UTILITIES, SULFUR AND
INTERCONNECTING SYSTEMS
Fabrication of Structural Steel (Platform & Ladders).

➤ **ACADEMIC QUALIFICATIONS**

B.TECH IN MECHANICAL ENGINEERING.

➤ **PERSONAL DETAILS**

Date of Birth	: 21 st April , 1997
Sex	: Male
Nationality	: Indian
Marital Status	: Single
Language Known	: English, Hindi
Passport no.	: T9112595
