

MOHAMED AZIM.A.F

MECHANICAL ENGINEER

- **Contact No :** +966 54 605 6870
- **E-Mail ID :** mohamedazim7298@gmail.com
- **Nationality :** Indian
- **Iqama No :** 2597501788
- **Location :** Dammam,KSA

PROFESSIONAL OBJECTIVE:

Design and Estimation Engineer with a forward-thinking approach, aiming to leverage my expertise for more efficient and accurate project estimates while advancing my skills.

SKILLS:

- **Auto CAD**
- **SP3D-PIPE DESIGNING**
- **ERP**
- **MS-OFFICE**

PROFESSIONAL EXPERIENCE:

Flometriq Filtration and Instrumentation (Aug/2019 - Dec/2024)

Design and Estimation Engineer

Estimation:

- Analyzed data for manufacturing cost estimation, including labor, materials, and production times.
- Analyzed supplier proposals and negotiate pricing to ensure the best cost-to-quality ratio.
- Specify appropriate materials of construction (e.g., stainless steel, carbon steel, or exotic alloys) based on project requirements and environmental factors.
- Estimate material quantities, NDT, painting costs and associated costs for strainer systems, including all necessary parts (flanges, gaskets, valves, etc.)..
- Streamlined estimating processes using cost estimating software. Prepared bids and proposals for new business acquisition.
- Work closely with engineering teams to assess the technical feasibility of strainer designs, including sizing and performance requirements.
- Enhanced the clarity of design documentation by providing clear depictions of strainer types, mesh specifications, and their relationship to the surrounding piping components.
- Perform detailed calculations for strainer sizing, considering factors such as flow rate, pressure drop, mesh size, and liquid properties to ensure the correct filter capacity.
- Collaborate with cross-functional teams, including design engineers, procurement teams, and project managers, to ensure that strainer systems are delivered as per schedule and within budget.

Design:

- Incorporated precise strainer dimensions into AutoCAD design, considering factors like pipe diameter, strainer size, and connection points.
- Generated technical drawings using AutoCAD and collaborated with production for appropriate designs.
- Use AutoCAD to design the proper sizing of strainers based on the required flow rate, pressure, temperature, and type of fluid being filtered.
- Detail individual components of the strainer system, such as baskets, covers, seals, drain valves, and pressure gauges, ensuring that each part is accurately dimensioned and labeled.
- Respond to feedback from design reviews and client requirements by modifying and updating AutoCAD drawings to reflect design changes.

EDUCATIONAL QUALIFICATION:

- **B.E - Mechanical Engineering: 2015–2019 (ANNA UNIVERSITY)**

LANGUAGES KNOWN:

- Tamil
- English
- Malayalam
