

Hafiz Abdul Ahad Qazi

Email: ahadqazi10@yahoo.com | Phone: +92 344 8344723 | Location: Hyderabad, Sindh

Summary

Results-driven and highly skilled Quality and HSE Manager with over 10 years of experience in the steel pipe manufacturing and 3-layer PE coating industry, primarily serving the oil and gas sector. Expertise in managing and implementing Quality Assurance, Quality Control, and HSE systems in accordance with API 5L, API 1104, API Q1, ISO 9001, ISO 14001, and ISO 45001 standards. Proficient in leading audits, developing inspection and testing plans, conducting failure investigations, managing NDT operations (ASNT Level II certified), and driving compliance with international codes and client specifications. Proven leadership in cross-functional coordination, continuous improvement, and regulatory compliance, including Pakistan Nuclear Regulatory Authority (PNRA) licensing and radiation safety protocols.

Experience

Manager – Quality, Health, Safety, and Environment

Crescent Steel and Allied Products Limited – Karachi, Pakistan (Sep 2015 – Present)

Working as Manager QHSE in a steel pipe manufacturing and coating facility primarily serving the oil and gas industry, supplying API 5L line pipes with external 3LPE coating for major national and international projects.

Key Responsibilities & Achievements:

- Oversaw and ensured full compliance with API 5L, API 1104, API Q1, and client specifications.
- Managed internal and external audits including API Q1, ISO 9001, ISO 14001, ISO 45001, and PNRA radiation audits.
- Developed and implemented Quality Inspection and Testing Plans (QITPs) tailored to project requirements.
- Authored work instructions for QC stations as per API and ASTM standards.
- Prepared and qualified WPS, PQRs, and WPQs in accordance with API 1104 and ASME Section IX.
- Supervised NDT activities (UT, RT, MPT, DPT) per ASNT standards.
- Conducted mechanical and chemical testing as per ASTM A370; evaluated coatings as per DIN 30670.
- Acted as Radiation Protection Officer for RT operations using gamma sources.
- Performed risk assessments, environmental impact analyses, and accident investigations.

- Delivered in-house HSE training and conducted emergency mock drills.
- Managed inventory, training needs, and budget for QHSE department.

Education

B.E. Metallurgy and Materials Engineering – Mehran UET, Jamshoro, Sindh (2014)

Achievements: First position in B.E, research competitions, and technical quizzes.

Certifications

- API Q1 10th Edition Practitioner – Leed International (UAE, 2025)
- ISO 14001:2015 Lead Auditor – SGS (Pakistan, 2024)
- ISO 9001:2015 Lead Auditor – TUV Austria (Pakistan, 2022)
- ISO 45001:2018 Lead Auditor – TUV Austria (Pakistan, 2021)
- ASNT Level II in DPT, MPT (2023), RT and UT (2016)
- Radiation Protection Course – PNRA (2018)

Skills

Quality Management, API Standards, NDT (ASNT Level II), HSE Compliance, Internal Auditing, Calibration, Lab Management ISO 17025, Radiation Safety, Training & Development, Incident Investigation, Environmental Assessment

	ROLE PROFILE	PAGE 1 OF 5

Name	Hafiz Abdul Ahad Qazi	Level : M 7
Job Title	Manager Quality and HSE	
Department	Quality Assurance, Quality Control, Health, Safety and Environment	
Reports to	Business Unit Head - SD	

A. OBJECTIVE

This post exists for supervision of all the operations related to Quality Assurance, Quality Control and HSE Department.

B. MAJOR RESPONSIBILITIES

S.No	Major Responsibilities
	Technical / Professional
	Quality Assurance
1.	Prepare and monitor annual Quality Assurance expenses budget and perform variance analyses and interpretations between the actual and budgeted amount.
2.	Assess the training needs of QA and QC staff to improve their understanding on QMS, HSE Management systems and product requirements. Also carryout safety talks with factory staff.
3.	Prepare the company for successful internal and external Quality and Lab audits. Perform QMS performance analysis through data analysis, internal audits and MR processes.
4.	Recommend purchase requisition for different consumables, spares, inspection instruments and test equipment. Evaluate the suppliers of raw material and/or other items on quality of the items to be supplied, reputation of supplier, etc. Review and sign the supplier evaluation report (QA-23). Ensure system for supplier and customer evaluation is in place and outsourced activities are controlled.
5.	Arrange Technical Assessment of Stored Items on Form QA-28, Review Quality and HSE documents annually for any revision on Form QA 30, Review and approve list of applicable legal requirements (QA-40), Review and approve Assessment of Measurement (QA-27), Prepare and sign List of Key Personnel on FORM QA 46, Review and sign Failure Mode and Effect Analysis (FMEA) QA-41 and FMEA Reaction and Contingency Plans (QA-42) of the QC department.
6.	Arrange and conduct Quality audits of different departments, Prepare and sign Internal Audit Check list on Form QA 47 when required.
7.	Review and update Quality manual as and when needed. Prepare, update and distribute Quality Assurance and QC procedures and other relevant documents. Approve Manual Holder Letter (QA-01), letter for Manual Revisions (QA-03), Document Transaction Memo (QA-05), and Document Change Note (QA-07).
8.	Ensure compliance with the applicable legal and statutory requirements with respect to Quality. Ensure risk assessment is carried out as per planned requirement.
9.	Issue Preventive Action Request (QA-18B). Review and approve Preventive Action Request Log Book (QA-19B). Issue Corrective Action Request (QA-18A). Review and approve request of Corrective Action Request Log Book (QA-19A). Ensure timely investigation of all reported accidents/incidents and effective implementation of corrective/preventive actions.
10.	Ensure regular calibration of equipment and maintain relevant records (QA 16) and (QA 25). Ensure the availability of personnel radiation monitoring equipment and conduct annual medical checkup of the radiation workers.
11.	Review standards listed in "List of Controlled Documents External QA-08". Review and update Master list of Instructions (QA-10).
12.	Initiate Management of Change Notification on form QA-45 for Quality Department and get it approve from Business Unit head.

	ROLE PROFILE	PAGE 2 OF 5

	Quality Control
13	Ensure product compliance with client specifications/ order requirements. Inform HOM/BUH/CEO production management in case of any divergence with quality standards and take corrective measures.
14	Prepare Decision Package (BC-05) of QC, QA and HSE and forward to HOM for approval. Prepare and monitor annual Quality Control expenses budget and perform variance analyses and interpretations between the actual and budgeted amount. Monitor Quality control expense budget.. Review min-max level of QC items including the stationary and ensure the requisite level is maintained at all times. Ensure the availability of the items when required. Recommend purchase requisition for different consumables, spares, inspection instruments and test equipment. Raise service requisition and purchase requisition for testing and calibration and other items required by QC department. Approve Requisition for Issue of Gate Pass (ST-14). Approve the inspection of raw material/client supplied material and pipes (ST-17).

15	Review tender documents and give pre and post bid comments on tender documents/purchase order. Review and approve work instructions for every work order. Review and approve Daily Pipe Production Report (QC-34), Daily Production Report External Coating (QC-35). Perform/ Check Chemical Test, Tensile Test, Guided bend test, Charpy V Notch Impact test, review and sign their reports. Authorize Charpy V-Notch Test Report, Guided Bend Test Report, Tensile Test Report and Chemical Composition Test Report. Review/sign mechanical and chemical test results related to pipe, different coating results and any other test report and/or procedure of pipe manufacturing and coating. Review and sign all necessary documents with respect to receiving inspection (QC-01, QC-08). Prepare and sign Quality Inspection Plan and Test Plan (QA-35) and got it approved from TPI/client.
16	Qualify the welders and ensure the welding process is as per API Specification 5 L Review and approve the Welding Procedure Qualification Record (QC-13) and Welding Personnel Performance Qualification (QC-14).
17	Ensure proper stacking of raw material as per the material manufacturer recommendations. Review results of the expired material before use and record comments on material in Stock Assessment Report of epoxy powder and other materials (QC-09 & QC-10). Inspect the product held in stock on monthly basis and review Monthly Yard and Warehouse Survey Report (QC-11). Carry out technical assessment of items stored in stores and Warehouse.
18	Coordinate with clients' representatives for inspecting and testing of raw material and pipes. Resolve any dispute/issues on quality of the product with clients' representative/inspectors. .Initiate the concession request form (QA-26) in case the specifications are not met and send it to M&S for approval from Client. Initiate the deviation request form (QA-36) in case of any deviations from standards due to customer requirements and send it to M&S for approval from BUH/Client.
19	Review and sign all Mill Test Certificates (QA-24). Prepare, Review and approve Data Analysis (QA-38) of QA and QC department. Reviewing Coil mill test certificates and analysis certificates of raw materials. Perform/ Review receiving inspection of raw materials and give comments about the conformance. Evaluate the suppliers of raw materials and/ or other items on quality of the items to be supplied, reputation of supplier etc. Review supplier evaluation report (QA-23).
20	Supervise all inspectors deputed at different inspection stands/stations of the pipe plant and coating plant. Prepare work instructions of different work orders in accordance with client's specifications / API 5L /DIN 30670, 30678 etc. Supervise destructive and non-destructive testing and review their results. Ensure good housekeeping and safe working environment at QC stations.

 Crescent Steel & Allied Products Limited	CRESCENT STEEL AND ALLIED PRODUCTS LIMITED	FORM HRR-02
	ROLE PROFILE	PAGE 3 OF 5

21	Responsible for implementation of all QC, QA and HSE procedures of QC Dept. Explain procedures, work instructions, and safety instructions to workers in Urdu, whenever necessary. Cooperate with production unit for improvement of product quality. Responsible for analysis and evaluation of Quality index. Responsible for updating of all records, pertaining to QC and to ensure their retrieval. Perform Data Analysis of Quality Control and prepare relevant records.
22	Initiate, sign and forward to HOM for approval for Use of pipes for Own Consumption, Testing, Display and Samples ST-35.
23	Ensure timely data entry such as for ERP, Google docs, e.t.c. Raise tickets for IT related issues. Raise work requests for Maintenance or testing related issues
24	Asses training needs of Quality Control department staff to improve their understanding of QC, QMS, HSE and product requirements. Perform Quality Objectives Target Setting and Monitoring activities of Quality Control Department. Implement actions for achieving the targets and prepare relevant records.
	Health, Safety and Environment
25	Manage certification/ Implementation/ updating of management systems (ISO 14001, ISO 45001) within the organization.
26	Set HSE Objectives of Quality Control Department, implement steps to achieve HSE targets. Review HSE objectives and verify the status of HSE objectives of concerned departments.
27	Prepare/ Review HSE instructions of Quality Assurance & Quality Control activities.
28	Taking the lead in Pakistan Nuclear Regulatory Licensing Audits and documentation. Conduct HSE management system audits of other departments. Conduct Radiation Safety surveys.
29	Ensure the availability of personnel monitoring equipment i.e. film badges and maintain the records of the radiation dose results received from PINSTECH. Ensure yearly medical checkup of the radiation workers being carried out in time and maintain the record.
30	Review/ Perform Hazard Identification and Risk Assessment of Different activities. Review/Perform Environmental Aspect Impact Analysis Different activities. Review/ Prepare Waste Management Plans.
31	Prepare and monitor annual HSE budget.
32	Manage HSE inventory.
33	Assess the HSE training needs of factory and head office staff.
34	Ensure compliance with HSE requirements. Inform senior management in case of any divergence with HSE standards and take corrective measures.
35	Monitor performance of different processes and suggest improvements.
