WORK EXPERIENCE

1. Quality Control Engineer – NFCA Metallurgy Lab/ Metal Casting Lab

@ Suhail Industrial Holding Group (Doha, Qatar)

December 2024 – Present

Responsibilities:

- Conducted quality control at every stage of Brass, Bronze, Copper Aluminum and Iron production, including raw material inspection, in-process testing, and final product approval.
- Performed mechanical tests (e.g. Tensile strength, Hardness, Microstructure and Load Test) and surface examinations to ensure product durability and compliance with ASTM/EN/ISO standards.
- Operate and maintain spectrometers such as SpectroMax X, Spectro Lab, and Bruker's OES for accurate elemental analysis.
- Implementing and practicing of ISO 17025.
- Perform oxygen PPM measurements using the OHN Bruker machine to ensure compliance with metallurgical standards.
- Analyze test data and prepare detailed reports on the findings.
- Develop and maintain documentation of testing procedures, equipment calibration, and maintenance logs.
- Calibrate and maintain spectrometer equipment to ensure precise and reliable results.
- Maintain accurate records of sample analyses and equipment performance.
- Collaborate with other laboratory personnel to resolve technical issues and troubleshoot equipment problems.
- Ensured compliance with occupational safety and environmental regulations during production processes.
- Actively Participate in 5S and Kaizen Programs.

2. Executive – Production

@ Pakistan Cables Limited – Power Cable Factory

February 2023 – December 2024

Responsibilities:

- Supervising staff to produce products as per specification generated from cable builder, organizing and monitoring workflow.
- To check the Tensile strength and Current conductivity of Copper Rods for wire drawing.
- To check the DC of Copper Conductor through Wheatstone Bridge Meter.
- Creating a daily schedule to allocate machine usage and workforce for production tasks.
- Collaborate with other departments to send and receive semi-finished products according to the daily schedule.
- Propose and implement recommendations to increase production efficiency, safety, and quality.

- Monitoring and controlling the yield losses during the production process, especially for extrusion machines.
- Liaising with other engineers to develop plans that improve production, costs, and labor required.
- Diagnosing problems in the production line and providing recommendations and training.
- Organizing workflow by assigning responsibilities to production officers and supervisors and preparation of forecast planning.
- Ensuring the safe use of equipment and scheduling regular maintenance.
- Developed a Production Dashboard of PCF department and maintain it on daily basis.
- Attend and prepare data of PCF department for Quality Implementation meeting with Director Operations and Senior Management.
- Associated with Senior Manager Production to work on different in house projects and make it a part of ISO documents.

3. Production Planning Engineer

@ Pakitex Board (Pvt) Ltd

March 2022 – February 2023

Responsibilities:

- Organize workflow to meet specifications and deadlines.
- To look into the proper veneer pasting into the molds.
- To check manufacturing process of Plywood also check the proper making of Glue.
- By using Continuous improvement techniques, quality level has been increased from 85% to 89%.
- Maintaining sufficient inventory levels to avoid production delays.
- Evaluating machine resources to ensure continuous production and minimal downtime.
- Organize and present projects in OBEYA & GEMBA also works on continuous improvement (KAIZEN).
- Maintain Floor Management by coordination with supervisors as well as the workers.
- To prepare daily production report and delay reports.
- Conducting 5S training sessions and regular 5S audits.
- Reduce variability in manufacturing by providing standard work methods and work instructions.
- Use SAP for material reservation, Process order and material transfer.

4. Quality Control Engineer – QA/QC Department

@ Agha Steel Limited

July 2021 – March 2022

Responsibilities:

- Perform chemical analysis using Optical Emission Spectrometers to verify melt chemistry against specified grades.
- Carry out mechanical testing on the Bending machine and Universal Testing Machine (UTM): tensile tests, yield strength, elongation and report results.
- Conduct wet chemical analysis for slag composition, basicity and related parameters; prepare reagents and maintain wet lab records.
- Calibrate and maintain lab equipment; perform routine checks, sample preparation and QA on standards and reference materials.
- Inspect incoming raw materials and additives (e.g., ferroalloys, CPC) and carry out acceptance testing.
- Support furnace process teams with on-line and periodic sampling and provide timely feedback to control chemistry and mechanical properties.
- Investigate non-conformances, root-cause analysis, issue corrective actions and follow up on effectiveness.
- Ensure safety compliance and maintain a clean, organized laboratory (chemical safety, waste disposal).
- Assist in internal and external audits and in implementing quality system improvements.

5. Quality Control Engineer – Steel Melt Shop

@ Nawab Brothers Steel Mill (Pvt) Limited – QA/QC Department

January 2020 – July 2021

Responsibilities:

- Conduct detailed inspections to identify surface defects, pinholes, and blowholes in steel billets.
- Develop and implement effective remedies to ensure defect-free production.
- Utilize cutting-edge spectroscopy machines (BELEC) to evaluate and ensure compliance with stringent chemical property standards.
- Operate Universal Tensile Machines (TENSION) and Bending Machine to test and validate mechanical properties.
- Proactively listen and address customer complaints, investigating issues and providing timely, effective resolutions.
- Rigorously check and maintain all working parameters to meet ASTM 615 standards, ensuring high-quality production.
- Identify defects, analyze their technical causes, and collaborate with the team to implement corrective and preventive measures.
- Maintain precise records of billet and bar production on a daily basis, ensuring accurate tracking and quality assurance.

EDUCATION

• **Masters of Engineering Management – Quality Management**

@ NED University of Engineering and Technology, Karachi

June 2021 – Feb 2024

Thesis Title: Influence of Total Quality Management Practices on the Transformation of How manufacturing Organization Works

Majors: Total Quality Management, Six Sigma Methodology, Operations Research, Accounting and Finance, Strategic Planning & Decision Making, Project Management Framework & Tool

• **Bachelors of Engineering – Metallurgical and Materials Engineering**

@ Mehran University of Engineering and Technology, Jamshoro

January 2016 – December 2019

Final Year Project: Effect of multiphase microstructure on the properties of AISI 4340 Steel

Majors: Physical and Extractive Metallurgy, Non Destructive Testing (NDT), Metallography, Metal Forming, Steel Making, Corrosion, Heat Treatment

ACHIEVEMENTS

RENU PROJECT (Start-Up Winner)

Government of Sindh, Pakistan

PROJECT IDEA:

Manufacturing of P.E Pipe by Using Black Carbon to improve quality and durability (2017-2018)

Pakistan Cables Limited (June 2023, Dec 2024)

- Reduced PVC wastage from 22% to 16% by the end of December 2024.
- Successfully reduced lost hours and enhanced overall production yield by implemented workforce balance strategies.

CERTIFICATIONS & TRAININGS

1. ISO 17025:2017 Laboratory Management System Training – Suhail Industrial Holding Group, Qatar
2. MS Excel Basic and Intermediate Training – Pakistan Cables Limited, Pakistan
3. Advanced Certification in Information Technology (ACIT) – Hopes Academy, Pakistan

LANGUAGES

- English – Professional Fluency
- Any Required Language – Willing To Learn

SKILLS

1. Quality Control
2. Six Sigma – Lean
3. Total Quality Management – TQM
4. Eight Disciplines Methodology 8D
5. MINITAB & SPSS for Analysis Data
6. Quick Learner
7. Team Player
8. Conflict Resolution
9. Leadership
10. Statistics
11. Health, Safety and Environment
12. Problem-solving and root cause analysis
13. Customer complaint resolution and quality improvement projects
14. Statistical Process Control (SPC)
